WESTFIELD

Proposed Station Upgrades

Projects with the Light Rail Accessibility Program (LRAP) seek to ensure ADA accessibility and modernize light rail stations along PRT's Red Line.

Join us at our online meeting to review the proposed upgrades, ask questions and give your input!

Your input is important to us and will play a key role in reshaping the station.

August 5, 2026 at 6:00pm - 7:30pm

Westfield is one of PRT's low platform stations to receive upgrades to improve accessibility and customer experience.

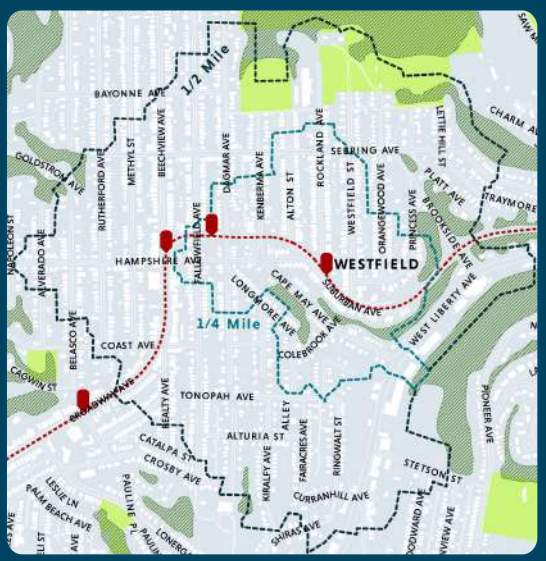

Westfield station is a station on Pittsburgh Regional Transit's light rail network, located in the Beechview neighborhood of Pittsburgh, Pennsylvania. Westfield Station is a very physically constrained site, located on a sloped segment of curving track in a constrained right-of-way.

PRT conducted a preliminary feasibility analysis to identify whether these factors preclude the design of a mini-high platform approach to providing accessibility. That analysis recommended proceeding with design development of mini-high platforms and identified strategies to address site-specific constraints.

The plan will explore opportunities to enhance the overall station experience such as improved connectivity, upgraded lighting, enhanced safety features, and additional passenger amenities.
